

AMENDMENTS

Please amend the above-identified application as follows:

In The Claims

Please substitute the following claim 36 for claim 36 currently pending in this application:

36. (Three Times Amended) A printed circuit board comprising:

- a printed wiring board;

- a plurality of components mounted on said printed wiring board; and

- an electrically continuous conformal coating for conformingly adhering to surfaces of one or more regions of the printed circuit board to which the conformal coating is applied, comprising,

- a conductive coating that prevents the electromagnetic waves from passing therethrough, said conductive coating conformingly adhered to the surface of the one or more regions of the printed circuit board, and

- a dielectric coating interposed between said conductive coating and predetermined portions of each of the one or more printed circuit board regions, wherein said dielectric coating is conformingly adhered to and insulates said predetermined portions of the one or more printed circuit board regions,

- whereby said conductive coating and said dielectric coating each do not significantly change dimensions of said printed wiring board and said plurality of components in said one or more printed circuit board regions to which said conformal coating is applied.
